Safety Administration

Safety summary

General information

F-signatures	
Collective F-Signature	50573CD9
Collective F-SW-Signature	50573CD8
Collective F-HW-Signature	00000001
F-Communication Address Signature	----
Current compilation	
Safety program state	The offline safety program is consistent.
Compilation time	8/6/2026 5:51:21 PM (UTC +2:00)
Used versions	
STEP 7	STEP 7 Professional V21
Safety	STEP 7 Safety V21
Access protection	
Safety-related project data	The safety program is protected by password
F-CPU	Access control at runtime is disabled.
Important note	Note that the settings regarding access protection only reflect the current settings while creating this safety summary. They can be changed later without any effect to the F-signature or compilation time stamp. Refer to the UMAC configuration for current valid access protection on the F-CPU.

Notes

Location	Note	Additional info
General information	The response time of your safety function also depends on the cycle time of the F-OB and the runtime of the F-runtime group. When using distributed F-I/O modules, the response time also depends on the PROFINET/PROFIBUS parameter assignment. The configuration and parameter assignment of the standard system also has an effect on the response time of your safety function. Note that the configuration and parameter assignment of the standard system is not subject to the access protection of the safety program and does not change the Collective F-Signature.	Note the warning "S085" in the manual and in the STEP 7 Safety online help.

Safety program settings

Safety mode can be disabled	No
Assignment of F-system block numbers	F-system managed
Safety system version	V2.8
Variable F-communication IDs enabled	No

System library elements used in safety program

Instructions (STEP 7 Safety)	
Name	**Used version**
TON	V1.4

Information on F-runtime group

RTG1

Fail-safe organization block	
Name	FOB_RTG1 [OB123]
Event class	Cyclic interrupt
Cycle time	100000 µs
Phase shift	0 µs
Priority	12

Main safety block	
Name	Main_Safety_RTG1 [FB1]
I-DB for main safety block	Main_Safety_RTG1_DB [DB1]

F-runtime group parameters	
Name	F-runtime group 1
Warn cycle time of the F-runtime group	110000 µs
Maximum cycle time of the F-runtime group	120000 µs
DB for F-runtime group communication	--
F-runtime group information DB	RTG1SysInfo

Pre/Post processing	
FC for pre processing	--
FC for post processing	--

F-blocks in safety program

Block name [Block number]	Function in safety program	Used and compiled in F-RTG	Signature
FOB_RTG1 [OB123]	F-OB [system-protected]	RTG1	9D8F6FAD
F_Forklift_Safety [FB2]	F-FB	RTG1	3679A130
Main_Safety_RTG1 [FB1]	F-FB	RTG1	217E110A
InstF_Forklift_Safety [DB3]	F-IDB	RTG1	A274E143
Main_Safety_RTG1_DB [DB1]	F-IDB	RTG1	27E959F6

Know-how protected F-blocks in the safety program

The safety program does not contain any know-how protected F-blocks.

F-compliant PLC data types in the safety program

The safety program does not contain any F-compliant PLC data types (UDT).

Named value data types used in the safety program

The safety program does not contain any named value data types (NVT).

Constants in the safety program

The safety program does not contain any constants.

Data from the standard user program

Parameters for safety-related CPU-CPU communications via RCVDP, SENDDP

No safety-related CPU-CPU communication via RCVDP, SENDDP is configured.

Communications via Flexible F-Link

No communications via Flexible F-Link are defined for the safety program.

Communications via OPC UA Safety

No communications via OPC UA Safety are defined for the Safety program.

Hardware configuration of F-I/O

F-CPU information	
Short designation	CPU 1513F-1 PN
Article number	6ES7 513-1FM03-0AB0
Firmware version	V3.1
Central F-source address	1
F-destination address range (PROFIsafe address type 1)	--
F-destination address range (PROFIsafe address type 2)	--
F-destination address range (PROFIsafe address type 3)	--

There is no hardware configured.
